

Example 5.

Original AI Text MAGE / SQuAD Semantic: 10 (ref.) GPTZero: 100.0% Pangram: 100.0% The Panthers offense, which led the NFL in scoring (500 points), was loaded with talent, boasting six Pro Bowl selections. Pro Bowl quarterback Cam Newton had one of his best seasons, completing 67.9 percent of his passes (296 of 432) for 3,837 yards and 35 touchdowns, with just 10 interceptions. Newton was the first quarterback in NFL history to throw for more than 30 touchdowns and rush for 10 in a single season. He had 10 rushing touchdowns in 2015, the most by a quarterback since he had 14 in 2011. Newton's 35 passing touchdowns set a Panthers franchise record. His favorite target was tight end Greg Olsen, who led the team in receptions (77) and receiving yards (1,104) and had seven touchdown catches. It was the third consecutive season that Olsen led the Panthers in receiving yards. He is one of six tight ends in NFL history with three consecutive 1,000-yard receiving seasons. While the offense was explosive, the defense was stingy. The Panthers finished the season ranked second in the NFL in both total defense and points allowed per game (19.3). Defensive end Jared Allen led the team with 10.5 sacks, and linebacker Thomas Davis had a career-high 115 tackles, two forced fumbles and a career-best four interceptions, returning one for a touchdown. Cornerback Josh Norman finished the season with four interceptions and 18 passes defended.	DIPPER Round 1 MAGE / SQuAD Semantic: 8 GPTZero: 100.0% Pangram: 100.0% Then it was that the Carolina of the champions, which scored five hundred points, was not even to be found lacking in talent, having six of its players in the Pro Bowl. The Quarterback, Newton, a Pro Bowler himself, did his best work in the season. He had a 67.9 completion percentage (296 of 432), passing for 3,837 yards, 35 TD passes and only 10 INTs. He was the first QB in the history of the game to pass for more than 30 TDs and run for at least ten. His ten rushing TDs were the most by a QB since he ran for fourteen in 2011. His 35 TD passes were a franchise record. His favorite target was tight end Greg Olsen, who led the team in catches (77) and receiving yards (1,104), and had seven TD catches. Olsen, a tight end, was the leading receiver for the third consecutive year and became one of only six tight ends in NFL history to record three consecutive 1,000-yard seasons. The offense was extremely powerful, while the defense was tight. The Panthers finished second in the league in total defense and points allowed per game. Jared Allen had 10.5 sacks, and Thomas Davis, a linebacker, had a career-high 115 tackles, two fumble recoveries, and a career-best four interceptions, one of which he returned for a TD. The cornerback, Norman, ended the season with four interceptions and eighteen passes defended.
DIPPER Round 2 MAGE / SQuAD Semantic: 4 GPTZero: 100.0% Pangram: 100.0% Then it turned out that the Carolina champions, who scored over 500 points, weren't lacking in talent either. The roster included six Pro Bowlers. Quarterback Newton, a Pro Bowler himself, did his best work in the regular season, passing for 2,963 yards, 35 TDs, and only 10 ints. He was the first QB in the history of the league to throw over 30 TDs and rush for at least 10. His ten rushing TDs were the most by a QB since he rushed for fourteen in 2011. His 35 TD passes were a new franchise record. His favorite target was TE Greg Olsen, who was the leader of the receiving corps, having 77 catches for 1,104 yards and seven TDs. Olsen, a TE, was the team's leading receiver for the third straight season, and became one of only six tight ends in the history of the league to log three consecutive seasons with over 1,000 yards. The offense was very strong and the defense quite solid. The Panthers finished second in the league in both total defense and points allowed. Jared Allen had 10.5 sacks and LB Thomas Davis logged a career-high 115 tackles, two fumble recoveries, and four interceptions, including a career-best INT returned for a TD. Cornerback Norman finished the year with four interceptions and eighteen passes defended.	DIPPER Round 10 MAGE / SQuAD Semantic: 2 GPTZero: 99.4% Pangram: 100.0% And it was soon obvious that the Carolinas, winners of the National Football League and having scored more than 500 points in the course of the season, were not in any way deficient in talent. They had six of their number in the Pro Bowl. Quarterback Cam Newton had been playing a superb game. Newton had passed for 2,863 yards, run for 35, and thrown away only ten interceptions. He was the first player ever to break both the pass and run records. Newton's favorite target was the wide receiver Greg Olsen, who with 77 receptions, reception yards, and rushing yards had led the league. For the third year in a row, he had been the best receiver in the league, and one of only six tight ends to achieve a thousand yards. The Carolinas had played powerful offense, and their defense was no less fine. They had been in second place in both offensive and defensive points. Jared Allen had had 10.5 sacks, Thomas Davis had had 115 tackles, two fumble recoveries, and four interceptions, one of which he had taken all the way to the goal. Thirteen players had recovered fumbles. Cornerback Richard Norman had intercepted four balls and broken up eighteen passes.

Amputee football is played all over the world but it is in its infancy in Scotland. Amputee football is a form of the game that is adapted for people who have had one or both legs amputated. The Scottish Amputee Football Association (SAFA) is the governing body for the sport in Scotland and is working to set up a new league. There are currently only two teams in Scotland - Glasgow Rangers and Heart of Midlothian - but SAFA is hopeful that more clubs will join in the future. Amputee football is a fast-paced and physically demanding sport, but it is also great fun and can be enjoyed by people of all ages and abilities. If you are interested in finding out more about amputee football in Scotland, or if you would like to join a team, please contact SAFA.

In this paper, we investigate the eigenvalues of non-Hermitian random matrices and the Brown measure of non-normal operators using a Hermitian reduction and linearization method. We show that the eigenvalues of non-Hermitian random matrices can be reduced to those of their Hermitian counterparts, and that the Brown measure of non-normal operators can be expressed in terms of the eigenvalue distribution of an associated linear operator. Our approach relies on a novel application of the perturbation theory of eigenvalues and the moment method, and provides a new perspective on the relationship between non-Hermitian and Hermitian systems. We demonstrate the power of our method by computing the eigenvalue distribution of several classes of non-Hermitian random matrices, including the Gaussian Unitary Ensemble (GUE), the Gaussian Orthogonal Ensemble (GOE) and the Wishart matrix ensemble. Furthermore, we apply our results to study the Brown measure of non-normal operators, which has applications in various fields such as signal processing, control theory, and random matrix theory. Our work provides a significant generalization of previous results in the field, and sheds light on the universal properties of non-Hermitian systems. The techniques developed here are expected to have far-reaching implications for the study of non-Hermitian phenomena in physics, engineering and other areas where complex systems are prevalent. In "O Jerusalem", a young woman named Rachel returns to her hometown of Jerusalem after years of living abroad. She is drawn back by the promise of rebuilding her family's home, which was destroyed during the Israeli-Palestinian conflict. However, upon her arrival, Rachel finds that the city is more divided than ever, and tensions are running high between Jews and Arabs. As she navigates the complex social and political landscape, Rachel becomes involved with a group of activists who are fighting for peace and reconciliation between the two communities. Along the way, she encounters old friends, new loves, and bitter enemies, all while trying to find her own place in a city that is both sacred and profane. As the conflict escalates and the stakes grow higher, Rachel must decide where her loyalties truly lie and what she is willing to sacrifice for the sake of peace.

Google has decided to discontinue Google Cloud Print after the year 2020, joining a list of other products which have been put to rest in recent years. This includes Google Reader and Google Inbox. Google Cloud Print, which was launched in 2010, is a service that allows users to print documents from anywhere, as long as they are connected to the internet. This means that a document can be printed from a smartphone, tablet or laptop without any need for cables or drivers. Google has made it clear that the service will continue to work until the end of 2020, but will no longer receive any software updates. Furthermore, from January 1, 2021, it will stop working entirely. The decision to discontinue Google Cloud Print comes as the company looks to focus on more profitable ventures. In a statement, Google said that it was discontinuing the service "to improve our overall cloud printing experience." The announcement has come as a surprise to many users, who see the service as an essential tool for printing from mobile devices. However, Google has suggested that there are a number of other cloud printing services available that will be able to fill the void left by Google Cloud Print. For those who are still using Google Cloud Print, Google has suggested that they begin transferring to another service before the year 2020 comes to a close. This will ensure that they are not left without an essential printing service. Overall, the discontinuation of Google Cloud Print is a reflection of the changing landscape of the technology industry. As companies look to streamline their operations and focus on more profitable ventures, it is inevitable that some beloved products and services will be phased out.
